Improving safety and effecting change through collaboration

The member organisations of Step Change in Safety share a common set of beliefs. These shared beliefs drive everything that we do and help us work together to achieve our vision. We therefore declare our personal commitment to action in the following key areas:

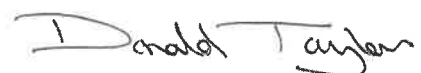

- All workers have a fundamental right to work in an environment where risks to their health and safety are properly controlled
- Everyone has a contribution to make
- We each have an individual personal responsibility for health and safety
- We have a moral duty to learn from the past and share our learning
- Industry cooperation is key to achieving our vision
